

Symptom Survey

SINUS INFECTION: Nasal discharge, bad breath, daytime cough, post-nasal drip, headache, facial pain or head banging. How often a problem for your child during the past 4 weeks?

- None of the time Hardly any time at all Some of the time Most of the time
 A small part of the time A good part of the time All of the time

NASAL OBSTRUCTION: Stuffy or blocked nose, nasal congestion, reduced sense of smell, trouble breathing with mouth closed. How often a problem for your child during the past 4 weeks?

- None of the time Hardly any time at all Some of the time Most of the time
 A small part of the time A good part of the time All of the time

ALLERGY SYMPTOMS: Sneezing, itchy nose/eyes, need to rub nose/eyes, or watery eyes. How often a problem for your child during the past 4 weeks?

- None of the time Hardly any time at all Some of the time Most of the time
 A small part of the time A good part of the time All of the time

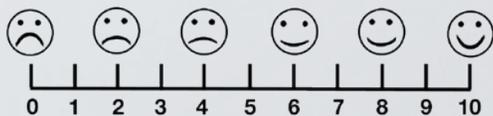

EMOTIONAL DISTRESS: Irritable, frustrated, sad, restless, or trouble sleeping. How often a problem for your child during the past 4 weeks because of nose or sinus illness?

- None of the time Hardly any time at all Some of the time Most of the time
 A small part of the time A good part of the time All of the time

ACTIVITY LIMITATIONS: Missed school/daycare, lost time with family/friends, unable to do projects. How often a problem for your child during the past 4 weeks because of nose or sinus illness?

- None of the time Hardly any time at all Some of the time Most of the time
 A small part of the time A good part of the time All of the time

OVERALL, how would you rate your child's quality of life as a result of nose or sinus problems? (Circle one number)

Worst Possible Quality-of-Life Half-way Between Worst and Best Best Possible Quality-of-Life

PHYSICIAN only:

- Baseline (pre-medication) Follow-up week [] (post-medication) Baseline (pre-surgical) Follow-up week [] (post-surgical) Score each of the 5 questions 1-7

Patient ID # _____ [] SN-5 Score (total sum / by 5)

Balloon Sinuplasty

technology by Acclarent®

Are your child's chronic sinus symptoms not completely responding to medication?

WHAT'S NEXT?

Studies indicate that Balloon Sinuplasty offers a treatment that may be more effective than adenoidectomy alone.^{5,8}

If your child has frequent infections and antibiotics have not resolved the problem, then surgery may be needed.

Your doctor may recommend:

- Adenoidectomy
- Balloon Sinuplasty with an adenoidectomy

TALK TO YOUR DOCTOR ABOUT BALLOON SINUPLASTY.

Balloon Sinuplasty safely and effectively widens the maxillary sinus openings, resulting in relief from sinus symptoms.⁴⁻⁷

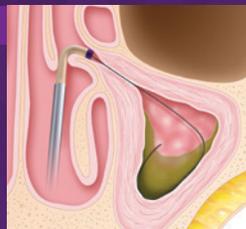

Sinus openings are accessed through the nostril using a narrow camera. Balloon Sinuplasty Technology doesn't remove any bone or tissue, there are no incisions, and nothing remains in your child's nose.

WHAT IS BALLOON SINUPLASTY?

Balloon Sinuplasty gently expands maxillary sinus openings, resulting in relief from sinus symptoms.⁴⁻⁷

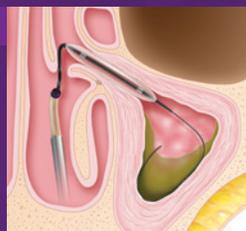

STEP 1

A guide is inserted through the nose and a soft flexible guidewire is inserted into the blocked sinus.

STEP 2

The balloon is advanced over the guidewire and is inflated to gently expand the sinus opening.

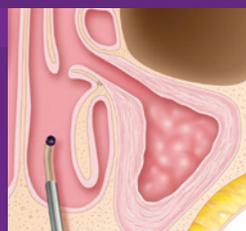

STEP 3

The sinus is washed out to remove mucus and the devices are removed.

STEP 4

The Balloon Sinuplasty system is immediately removed leaving the sinus open.

Adenoidectomy and Balloon Sinuplasty may be performed during the same procedure. Talk to your doctor about benefits and risks.

YOUR CHILD IS NOT ALONE.

There is poor evidence for antibiotic success in chronic sinusitis.^{1,2}

The net result is compromised quality of life, considerable loss of school time and accumulation of medical expenses, affecting the children themselves and their parents.³

Break the cycle now!

"In 6th grade Ryan missed a lot of school. After Ryan's surgery, it's been so much nicer having a healthy kid."

– Debbie

Ryan's mother, talking about the benefits of Balloon Sinuplasty.
